

# SADANAND KENGANAL

**Lead Engineer (Staff-track) | Full-Stack: React/Next.js (TypeScript), Node/NestJS, Python/FastAPI | AWS | Frontend + Backend Architecture | Mentoring**

Bengaluru, India | Phone: +91-8095548004 | Email: sadanandkenganal@gmail.com | LinkedIn:

<https://www.linkedin.com/in/sadanand-kenganal-05329046/>

## SUMMARY

---

Lead full-stack engineer with 10+ years building and scaling web products end-to-end. Hands-on across **frontend + backend architecture**, system design, and AWS delivery. Experienced leading small teams (2–5 engineers), mentoring juniors, and driving complex initiatives from **0 → production**.

**AI-enabled engineering:** I use AI tools (e.g., **Windsurf**) to speed up repetitive work like scaffolding, refactoring, test/documentation generation, and code exploration—while maintaining strong quality gates (reviews, linting, tests, and security checks). Familiar with LLM feature patterns (API integration, retrieval/RAG fundamentals, evaluation mindset, and security basics).

## CORE SKILLS

---

**Languages:** TypeScript, JavaScript, Python | Working knowledge: Java (Spring Boot)

**Frontend:** React, Next.js, Redux, HTML5, CSS3, Tailwind CSS, Bootstrap

**Backend:** Node.js, NestJS, Express, FastAPI (Python) | REST APIs | Auth (JWT/OAuth basics)

**Data:** PostgreSQL, MySQL, MongoDB, DynamoDB

**Observability (optional but strong):** logging/metrics/tracing mindset, alerting, dashboards

**AWS:** IAM, EC2, API Gateway, Lambda, CloudWatch, S3, SNS, SQS

**Caching & Messaging:** Redis, Memcached | RabbitMQ, Kafka | event-driven patterns

**DevOps:** Docker, Kubernetes | CI/CD (GitLab CI, Jenkins, GitHub Actions)

**Engineering:** System design, architecture reviews, code reviews, mentoring, Agile/Scrum

## EXPERIENCE

---

### 7-Eleven — Bengaluru

**Apr 2023 – Present**

*Lead Engineer / Lead Full-Stack Engineer*

- Lead delivery for key product modules in a microservices-based platform; balance hands-on engineering with team execution (~80/20).
- Own **frontend architecture** for a large Next.js application (component standards, state patterns, performance, and maintainability).
- Build reusable UI components and shared patterns (React/Next.js + Tailwind) to improve developer velocity and consistency.
- Collaborate with backend teams to define **API contracts**, drive end-to-end delivery, and review system design tradeoffs.
- Contribute across backend services (NestJS, Python/FastAPI, and some Java/Spring Boot), including caching with Redis and data modeling with PostgreSQL.
- Support production readiness through AWS + Kubernetes deployments and GitLab CI/CD pipelines (build, deploy, release hygiene).
- Mentor and guide ~5 engineers (4–6 yrs exp) via code reviews, pairing, and design walkthroughs; raise quality and ownership across the team.
- **Tech:** TypeScript, React, Next.js, Tailwind CSS, Node.js, NestJS, Python (FastAPI), Java (Spring Boot), PostgreSQL, Redis, AWS, Kubernetes, GitLab CI/CD

**Kaleyra — Bengaluru****Dec 2020 – Mar 2023***Software Engineer – Lead (Full Stack)*

- Owned end-to-end delivery across **React UI** and **Node.js/NestJS** services for omnichannel communication workflows (SMS / WhatsApp / Voice).
- Designed and implemented scalable backend patterns using **Redis caching** and **async/event-driven processing** (RabbitMQ, SNS/SQS) to improve throughput and reliability.
- Built and operated AWS components (API Gateway, Lambda, S3) with strong **observability** and production readiness using CloudWatch (logs/metrics/alerts).
- Partnered with product and engineering stakeholders to refine requirements, define API contracts, and deliver features with predictable timelines.
- Led a small team (2 engineers) and raised engineering quality through code reviews, design walkthroughs, and task breakdown/ownership.
- Contributed to data modeling and integration across **MySQL** and **DynamoDB**, balancing performance, consistency, and operational simplicity.

**Tech:** React, Redux, Node.js, NestJS, Redis, RabbitMQ, MySQL, DynamoDB, AWS (API Gateway, Lambda, S3, CloudWatch), SNS/SQS

**Synechron — Bengaluru****Jan 2019 – Dec 2020***Lead – Technology*

- Delivered enterprise web modules for banking clients; owned critical workflows (including approvals) from requirements through production release.
- Built SPA experiences using **React + Redux**, integrating REST APIs with predictable state management and reusable UI patterns.
- Implemented authentication and authorization using **JWT**, and collaborated with backend/stakeholders to define API contracts and edge cases.
- Improved maintainability and release quality through testing practices (Jest), code reviews, and clean module boundaries.
- Worked in Agile delivery with cross-functional teams to ensure requirement clarity, reduce rework, and meet timelines.

**Tech:** React, Redux, Node.js/Express, MongoDB, REST APIs, JWT, Jest

**Joulestownatts Business Solutions — Bengaluru****Feb 2018 – Jan 2019***Module Lead*

- Led a team of 3 engineers to deliver reporting and portal features with clear ownership and predictable execution.
- Built React + Redux (Saga) modules and supported Node.js APIs for end-to-end feature delivery.
- Containerized services using Docker and supported deployments/scaling using Kubernetes.

**Tech:** React, Redux (Saga), Node.js, MySQL, Docker, Kubernetes

**Mindtree — Bengaluru****Jan 2016 – Jan 2018***Senior Software Engineer*

- Developed and maintained Drupal 7 applications with custom modules and integrations backed by MySQL.
- Contributed to modernization efforts by building selected UI modules using React/Node.js alongside the existing platform.
- Worked in Agile/Scrum teams with product, QA, and design to deliver stable releases.

**Tech:** Drupal 7, PHP, MySQL, JavaScript, React (exposure), Node.js (exposure)

*Web Developer*

- Built web applications using PHP (Yii2) and JavaScript; owned features end-to-end including database design.
- Delivered production-ready releases by collaborating with QA and stakeholders, and supporting bug fixes post-release.

**Tech:** PHP (Yii2), JavaScript, MySQL

**SELECTED PROJECTS**

---

Representative projects demonstrating end-to-end ownership and team leadership.

**Real Estate Platform (Admin + Workflows)**

*Tech:* NestJS (TypeScript), PostgreSQL, DynamoDB, React (TypeScript), Tailwind CSS, Redis, Docker, Kubernetes, AWS (S3)

- Built and evolved core modules for managing real estate entities (stores, shops, buildings) with secure admin workflows.
- Led engineers and contributed to system design, API contracts, and performance considerations.
- Team size: ~15 (multi-functional).

**Kcloud Communication Platform (SMS / WhatsApp / Voice)**

*Tech:* NestJS, React (TypeScript), Tailwind CSS, Redux, Redis, RabbitMQ, MySQL, MongoDB, AWS

- Designed and developed React components and APIs supporting multi-channel communication workflows.
- Led 2 engineers; drove code reviews, task planning, and release readiness.
- Team size: ~15.

**Wholesale Banking Admin (Approvals Module)**

*Tech:* React, Redux, Node/NestJS

- Owned end-to-end delivery of approval workflows; collaborated across teams for requirements and rollouts.
- Focused on clean architecture, state management, and maintainable UI patterns.
- Team size: ~10.

**Cancer Care Platform (Patient Journey + Payments + Video)**

*Tech:* React, Redux, Node.js, PostgreSQL, Objection.js, AWS

- Built patient-facing workflows including video, online/offline payment flows, and supporting APIs.
- Led 2 engineers in a small team; handled DB design and API development.
- Team size: 3.

**CERTIFICATIONS**

---

- Blockchain Certification — IIT (Kanpur) (add credential link/ID)
- Node.js Certification — Edureka
- React.js Certification — SpringPeople

**EDUCATION**

---

**MCA, R V College of Engineering (VTU University) — 2013**

**BCA, S B College Gulbarga — 2010**
